

ABSTRACT OF THE DISCLOSURE

A spin stand which comprises a disk rotator for rotating a magnetic disk and a head mover for supporting the magnetic head in such a way
5 that it can be attached or removed and moving the magnetic head at
least in the direction of the track width of the disk, and the head mover is
provided with a fine positioner capable of positioning with high accuracy
within a very small range of motion and a coarse positioner for setting the
very small range of motion of this fine positioner at a prescribed discrete
10 position.
